

Case Study

Lifestyle Fitness

Lifestyle Fitness has integrated **ievo** fingerprint readers into gym sites across the UK.

With a focus on keeping costs low, but maintaining a high spec gym, Lifestyle Fitness have invested in fingerprint access-control pods across the UK to improve the efficiency within their gyms. The highly successful fitness chain has four sites within the UK with the new access control system already installed, with three more scheduled in the near future.

Lifestyle Fitness required a new system that was not only easy to use and highly reliable but one that was more secure than PIN or tokens. They were therefore introduced to **ievo** by a recommendation from Vistec Systems.

Vistec Systems is one of the largest independent electronic security specialists in the UK. A large share of Vistec's business is in providing their clients with mid to high end access control systems.

Since 1992, Vistec Systems mission has always been to provide customers with effective and reliable solutions to security problems, with a quality of installation and after sales care that sets them apart from their competitors. Vistec are proud to be one of the leading independent security specialists, with thousands of installations around the UK.

"Vistec Systems are always looking to expand their range of reliable security products, the ievo reader "fits the bill". The ievo readers interface seamlessly with the Paxton Net2 System combined with the Cloud Access System. This enables us at Vistec Systems to offer our clients a complete biometric solution. The first site for this venture was commissioned in December 2011 and to date all systems are working perfectly."

*Dean Hawkins,
Vistec*

HOW THE ACCESS SYSTEM WORKS

The member registers their print upon signing up with Lifestyle Fitness. This print now acts as the identification method, replacing the traditional membership card. When the member attends the gym they simply press their finger onto the reader and this opens the first door of the pod. The pod door behind closes and the second door opens. This provides the member with access to the gym. There is then a second reader inside the gym to provide egress out of the gym.

Security solutions
as individual as you are.

The **ievo** reader was installed in order to improve access control in terms of ease of use and quickness for members.

The previous system required members to wait until a member of staff was available to register them. The gym had further problems of members losing their membership cards which again cost Lifestyle Fitness both time and money producing new cards. The new system has now eliminated the need for cards.

Lifestyle Fitness currently have the **ievo** system installed within Stoke, Barnsley, Darlington, Carlisle and Chesterfield with planned installations for future sites including Wembley.

“The new system is great, we are thrilled with the results. The system looks fantastic and our members have all expressed their positive feelings towards it. From my view the new system also eliminates non-members accessing our facilities through the passing about of gym cards from members to non-members. It is a much fairer system as it means everyone there has paid. We are looking to implement this system within more of our gyms in the near future!”

*Gordon Hall, Managing Director
Lifestyle Fitness Clubs*

“I have never seen gym access like this before, I love it. It is much easier for gym users as we never have to worry about remembering our membership cards, I can use my fingerprint to gain access. The pod itself looks very high tech, it's very impressive looking.”

*Gym Member,
Darlington Lifestyle Fitness*
